Circles Smaller than 12":

The Micro Fence Circle Jig system offers an assembly option for smaller circles. Figures 3 & 4 show the rear trammel bar mounted in front of the spindle assembly using the two 5/16" X 1 1/2" pins that are included in your parts bag. After removing the two 12" guide shafts from the spindle assembly trammel bar, these pins may be installed in a position pointing toward your router. They will provide a place to mount the rear trammel bar, and thus utilize the 1/4" trammel pin as your center. **Always pay particular attention to keep the Circle Jig parallel to your workpiece.** The trammel point can be adjusted vertically so that its shoulder supports the jig. Optionally, a spacer, (or washer) of appropriate thickness can be placed between the work and the bottom of the spindle bar. (See Figure 4).
